CWT COMPACT

Things just got better ...

- ♦ Licence plate entry support
- ♦ Rates and instructions on display
- ♦ Electronic locks
- ♦ Solar-powered operation

- ◆ Fully EMV certified
- Designed for Cale WebOffice
- ♦ Reliable and secure
- Upgrade of MPC available

Unique Cale design

The CWT Compact belongs to the latest generation of unattended payment systems from Cale.

It combines the robust mechanical design based on the well-known and proven MPC terminal already installed across the world with completely new electronics and software, until today only available in premium segment products from Cale.

Premium segment features

The CWT Compact provides sophisticated yet simple payment services with cutting-edge features including software controlled buttons, licence plate entry, audio interface, remote tariff change, and NFC applications.

Ready for integration

The CWT Compact and CWO provide a complete and powerful system for efficient management of any parking operation.

Cale's open interface makes integrations with external systems straightforward; enabling functions such as integration with ANPR, permit systems, and enforcement solutions to further optimise your operation.

Secure, f exible payments

The CWT Compact handles all payment options with the highest security standards in the industry and all software development follows strict PCI regulations.

The CWT Compact features payment methods such as coin, EMV, magstripe cards, MIFARE, RFID and other NFC solutions.

Security and low-cost ownership

Fight vandalism with the CWT Compact; its high-security stainless steel design makes it both durable and inexpensive to maintain.

The Cale-patented electronic lock system, together with intrusion sensors, puts you in control.

To further increase security, the terminal can be fitted with a vibration detector and siren to identify and scare off breakins and vandalism before any major damage is done.

Disabled access

The CWT Compact is compliant with all relevant standards for disabled access.

End user experience

With the graphic display, alphanumeric keyboard and preconfigured step-by-step interfaces, complex rates become easy to understand for the end user.

The layout of the user interface panels can be fully customised and in addition to images, the graphic display module also shows different fonts and all characters used in every alphabet. The user interface can be updated remotely using Cale WebOffice.

Autonomous operation

The integrated solar panel makes it possible for the terminal to operate off the grid.

Printer

The high resolution printer for up to 150 mm tickets handles graphics, vouchers and 2D barcodes.

Back off ce and communication solutions

Cale WebOffice (CWO) provides tools that simplify day to day administration, statistics and reports.

CWT Compact software, including OS and local settings like configurations and the user interface can be upgraded remotely using CWO.

Communication is available via cable (LAN) or GPRS and data is encrypted and compressed to be both secure and cost effective.

Separate cabinet and pedestal

The terminal is divided into two parts to simplify installation, relocation, upgrade and service.

Wide area of application

The flexibility of the CWT Compact also makes it ideal for a wide range of unattended payment applications. Possible areas of operation range from parking and public transportation to fishing permits and green fee charges

Some of the features described may be optional. Due to continual product development, specifications are subject to change without notice.
